

PHAM SON TUNG
Unity Game Developer

Dong Anh, Ha Noi • pstunga1k55@gmail.com • (+84) 398 946 414

Education

Hanoi University of Science and Technology (HUST)

Ha Noi, Viet Nam

Bachelor of Computer Science

Aug 2025

GPA: 3.72 / 4.00

TOEIC 4 Skills: Listening 485 | Reading 440 | Writing 200 | Speaking 140

Experience

VNG ZingPlay Game Studios

Ha Noi, Viet Nam

May 2024 – Aug 2024

Game Development Fresher Programme

Tech Stack: JavaScript, Java, Cocos2d-x, Internal Networking Framework, Git.

- Completed a game development training programme with a team project.
- Collaborated with a 3-member team to co-design the architecture of a multiplayer strategy game inspired by *Clash of Clans*.
- Owned the design and implementation of the **Soldier System** and **Shop System**.
- Designed and implemented deterministic client-server combat simulation by sharing gameplay logic between the **JavaScript** client and **Java** backend.
- Eliminated synchronization inconsistencies using deterministic calculations, precomputed mathematical constants, and custom seeded random number generation.
- Integrated gameplay communication using the company's internal networking framework for gameplay synchronization and persistent game state management.
- Worked with the **Java** backend infrastructure utilizing internal Memcached wrappers for resource caching, persistence, and error handling.

Falcon Game Studio

Ha Noi, Viet Nam

Mar 2025 – Apr 2026

Game Developer

- Developed and maintained gameplay systems for commercial Unity mobile puzzle games on Android and iOS using **ScriptableObject**-driven architecture and **Assembly Definition** (asmdef) modularization.
- Integrated gameplay services through the company's internal networking framework, supporting player progression, inventory, replay, hints, LiveOps events, social features, and server-driven gameplay configurations.
- Developed internal web tools for level authoring, server configuration, deployment workflows, and designer productivity.
- Optimized rendering, memory usage, and runtime performance through reusable gameplay systems and rendering optimizations.
- Integrated and maintained **AppLovin MAX**, **Google Mobile Ads (AdMob)**, **Firebase Analytics**, **Firebase Crashlytics**, and internal SDKs across Android and iOS.
- Utilized **Firebase Analytics** and **Crashlytics** to monitor crashes, runtime performance, slow-loading operations, and application stability during development and production.

Commercial Projects

Unblocky - Color Jam: A color-sorting puzzle game where players must strategically release and arrange colored blocks before the timer expires. [Google Play](#) | [App Store](#). 500k+ downloads - 3.9★ Android - 4.8★ iOS

Tech Stack: Unity, C#, DOTween, ScriptableObject, Addressables, Assembly Definition (asmdef), Spine, Internal Networking Framework, Firebase Analytics, Firebase Crashlytics, Git.

- Implemented approximately **50%** of the game's core puzzle mechanics, including Gate, Compound Block, Lock, Transformation, Hidden Object, and Bond systems.
- Designed and implemented the **Replay**, **Hint**, and **Block Rush LiveOps** systems by integrating gameplay logging, internal networking modules, configurable bot opponents, and server-driven progression.
- Implemented gameplay features including **Friend System**, **Win Streak**, **No Timer**, and multiple pre-boosters by integrating gameplay logic with internal gameplay services.
- Modularized gameplay features using Assembly Definition (asmdef), integrating internal company modules while creating dedicated modules for the **Friend System**, **No Timer**, and **Block Rush**.
- Built data-driven gameplay configurations using **ScriptableObjects**, enabling designers to modify gameplay parameters without code changes.
- Utilized **Addressables** for modular prefab management, configurable asset loading, and asset preloading to reduce runtime loading latency.
- Implemented gameplay and UI animations using **DOTween**, including object movement, UI transitions, and interaction feedback.
- Customized **Spine** animations for UI effects, including runtime skin switching and dynamic skeleton path adjustments for booster rocket trajectories.
- Built, deployed, and maintained a web-based level editor using **Unity WebGL** and **Docker**, enabling designers to create, edit, and validate game levels efficiently. View editor: [Editor Website](#)
- Implemented **server configurations** for gameplay parameters, feature toggles, level unlock conditions, pricing, and other server-driven LiveOps configurations.

Ball Jam - Color Sorting: A color-matching puzzle game where players release colored ball tiles to make them fall into matching trays. [Google Play](#) | [App Store](#). 5k+ downloads on Android.

Tech Stack: Unity, C#, DOTween, ScriptableObject, Addressables, Assembly Definition (asmdef), Internal Networking Framework, Firebase Analytics, Firebase Crashlytics, AppLovin MAX, Google Mobile Ads (AdMob), Git.

- Architected the modular gameplay codebase, established project structure and coding standards, and implemented the core **Tray** and **Tile** systems as the gameplay foundation.
- Developed gameplay mechanics including **Hidden Tray**, **Hidden Tile**, **Pin Bar**, **Frozen Container**, and **Locked Container** while extending shared Shop and Popup frameworks.
- Integrated existing **Assembly Definition** modules and customized for project-specific implementations.
- Built data-driven gameplay configurations using **ScriptableObjects** for configurable gameplay balancing.
- Implemented gameplay animations using **DOTween** for ball movement, tray interactions, and tile state transitions.
- Integrated **AppLovin MAX**, **Google Mobile Ads (AdMob)**, **Firebase Analytics**, **Firebase Crashlytics**, and internal company modules while leading Android and iOS build integration and resolving SDK compatibility issues for production releases.

Skills

Programming: C#, C++, Java, JavaScript.

Game Development: Unity, Cocos2d-x, Gameplay Architecture, Gameplay Systems, ScriptableObject, Addressables, Assembly Definition, DOTween, Spine, Client–Server Synchronization, Performance Optimization, Version Control.

Languages: Vietnamese (Native), English (Professional Working Proficiency).
