

PHẠM SƠN TÙNG

Unity Developer — Mobile Games

Dong Anh, Ha Noi • pstunga1k55@gmail.com • (+84) 398 946 414

SUMMARY

Unity mobile game developer with 1+ years of experience shipping commercial puzzle games on Android and iOS. Delivered core gameplay systems, LiveOps features, and monetization integrations for a title with 500k+ downloads. Strong in data-driven architecture (ScriptableObject, Addressables), gameplay-service integration, and cross-team collaboration with designers.

SKILLS

Languages: C#, C++, Java, JavaScript

Unity & Gameplay: Gameplay Architecture, ScriptableObject, Addressables, Assembly Definition (asmdef), DOTween, Spine, Client-Server Sync, Performance Optimization

Tools & Services: Git, Firebase Analytics/Crashlytics, AppLovin MAX, AdMob, Cocos2d-x

3D Pipeline: 3D Model & Material Setup, Shader & Lighting Configuration, Shadow Optimization, Draw Call Reduction via Shared Materials & Batching

EXPERIENCE

Falcon Game Studio — Game Developer

Unity mobile puzzle games (Android/iOS)

Ha Noi, Viet Nam

Mar 2025 – April 2026

- Shipped and maintained gameplay systems for **Unblocky – Color Jam** (500k+ downloads, 4.8★ iOS) and **Ball Jam**, building ~50% of core puzzle mechanics and LiveOps features (Replay, Hint, Block Rush) using ScriptableObject - driven, asmdef-modularized architecture.
- Architected the modular gameplay codebase for Ball Jam from scratch, including project structure, coding standards, and dedicated Assembly Definition (asmdef) modules for core systems (Tray, Tile) and features (Friend System, No Timer, Block Rush).
- Built and deployed a web-based level editor (Unity WebGL + Docker) that let designers create and validate levels independently, removing engineering as a bottleneck.
- Integrated AppLovin MAX, AdMob, Firebase Analytics/Crashlytics, and internal SDKs across Android and iOS; used crash and performance data to guide stability fixes.
- Used Addressables for modular asset loading and preloading to cut runtime load latency, and DOTween/Spine for gameplay and UI animation.
- Set up and configured 3D models and materials from artists in Unity for Unblocky – Color Jam and Ball Jam, including shader and lighting setup.
- Optimized rendering performance by reducing shadow distance, disabling real-time shadows on low-interaction objects in favor of sprite renderer equivalents, and consolidating shared materials to leverage Unity's built-in batching, reducing draw calls and improving frame stability on mid/low-end Android devices.

VNG ZingPlay Game Studios — Game Development Fresher

JavaScript, Java, Cocos2d-x

Ha Noi, Viet Nam

May 2024 – Aug 2024

- Co-designed the architecture of a multiplayer strategy game (Clash of Clans-style) with a 3-person team, owning the Soldier and Shop systems end to end.
- Implemented deterministic client-server combat simulation across JavaScript client and Java backend, eliminating desync issues via precomputed constants and seeded RNG.
- Integrated the studio's internal networking framework for after-battle sync and persistent game state, and worked with Java/Memcached backend infrastructure.

COMMERCIAL PROJECTS

Unblocky – Color Jam — color-sorting puzzle game, 500k+ downloads, 3.9 Android / 4.8 iOS · [Google Play](#) | [App Store](#)

Ball Jam – Color Sorting — color-matching puzzle game, 5k+ downloads on Android · [Google Play](#) | [App Store](#)

EDUCATION

Hanoi University of Science and Technology (HUST)

Bachelor of Computer Science — GPA 3.72/4.00

TOEIC 4 Skills: Listening 485 | Reading 440 | Writing 200 | Speaking 140

Ha Noi, Viet Nam

Aug 2025
